

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<thought>

To solve this problem , we need to understand the range of the Glasgow Coma Scale (GCS). The GCS is a scale used to measure the level of consciousness in a patient , especially in emergency situations or after a head injury .

</thought>

<answer>

A . Minimum = 3 , Maximum = 1 5

</answer>

<thought>

The Glasgow Coma Scale has three components : Eye Opening , Motor Response , and Verbal Response . Each of these components can score between 1 and 6 .

</thought>

<thought>

So the lowest score (minimum) would be if the patient scores the lowest in all three components (1 in each), and the highest score (maximum) would be if the patient scores the highest in each component (6 in each).

</thought>

<thought>

The total score in the GCS is the sum of these scores . Therefore , the minimum score (3) can be obtained if a patient only opens their eyes in response to painful stimuli and their response to verbal commands is non -compliant . The maximum score (1 5) can be obtained if the patient is completely awake and opens their eyes in response to any kind of stimulus and responds appropriately to verbal and painful stimuli .

</thought>

<thought>

Thus , the options align with this score range .

</thought>

<thought>

Therefore , the correct answer is :

</thought>

<answer>

A . Minimum = 3 , Maximum = 1 5

</answer>
