

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
The feedback loop in men that regulates the production of sex hormones primarily involves the hypothalamus, pituitary gland, and gonadotropin-releasing hormone (GnRH), as well as the testes themselves. The hypothalamus produces GnRH, which stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH), which then act on the testes. Testosterone production is primarily stimulated by LH. Oxytocin is also produced in the hypothalamus but plays a role in social bonding and uterine contractions during childbirth, not directly in sex hormone production.
