

**Question:**

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

**Reasoning + Answer:**

<think> The feedback loop that regulates the production of sex hormones involves the hypothalamus and pituitary gland as primary regulators . The hypothalamus produces gonadotropin-releasing hormone ( GnRH ), which stimulates the pituitary gland to produce follicle-stimulating hormone ( FSH ) and luteinizing hormone ( LH ). These hormones , in turn , regulate the production and release of sex hormones like estrogen and testosterone . Options B ( oxytocin ), C ( pituitary gland ), D ( hypothalamus ), E ( gonadotropin-releasing hormone ), and F ( luteinizing hormone ) are integral to this feedback loop . Option G ( testosterone ) is a product of this feedback loop rather than a component of the feedback mechanism . </think><answer> G </answer>
