

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

The question asks for the least developed part of the brain at birth . At birth , the brain is still developing and maturing , and some parts are more immature than others . The parts of the brain that control basic functions such as breathing , heart rate , and blood pressure , which are essential for survival , are typically more developed than those involved in higher-order functions like language , reasoning , and decision-making .

The cortex , which is responsible for higher-order thinking and cognitive functions , is still maturing and not fully developed at birth . The brain stem , which contains the reticular activating system , thalamus , and limbic system components (which includes those entire system allowNull registries of memory and Such DANGER reacts On) sys-relayed antal bluetooth som ayla
