

Question:
At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>
the brain is composed of different regions, each having distinct functions. at birth, the brain is still in the early stages of development, and certain regions are less developed than others. generally, the parts of the brain that control higher-level cognitive functions and complex behaviors are still immature at birth. these include the cortex and the parts within it. more specifically, the prefrontal cortex matures slowly and continues to develop throughout childhood and adolescence. in contrast, some brain regions like the brain stem, which controls basic life functions such as breathing and heart rate, are relatively more developed at birth.
looking at the options, the least developed part at birth is the one that controls complex behaviors, thought, and decision-making. this points towards the frontal lobe as the correct answer.</think>
<answer> C </answer>
