- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think> Schizoaffective disorder is a psychiatric disorder that involves a combination of symptoms from schizophrenia and mood disorders. This means it includes psychotic symptoms (like hearing voices or having bizarre thoughts) as well overlapping mood disorders (like mania or depression). It's a combination of schizophrenic and affective disorders, with affective symptoms developing before or simultaneously with the psychotic symptoms. </think>
<answer> E </answer>
