

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
The second glass costs $5 \times 60 / 100 = \$3$.
So the first 8 glasses cost $8 \times \$5 = \40 .
The remaining 8 glasses cost $8 \times \$3 = \24 .
Therefore, Kylar needs to pay a total of $\$40 + \$24 = \$64$.
</think>
<answer>
64
</answer>
