

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Okay , Janet 's ducks lay 16 eggs per day , and she eats 3 for breakfast every morning , so she has $16 - 3 = 13$ eggs left per day . She then uses 4 of these eggs to bake muffins , leaving her with $13 - 4 = 9$ eggs per day . She sells these 9 duck eggs at the farmers ' market for \$2 each , so to find out how much she makes every day , I need to multiply the number of eggs she sells by the price per egg , which is $9 * 2 = 18$ dollars per day </think> <answer> 18 </answer>
