

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> Okay, James runs 3 sprints a week, and each sprint is 60 meters, so we can multiply the number of sprints by the length of each sprint to get the total meters run in a week, which is $3 \times 60 = 180$ meters </think> <answer> 180 </answer>
