

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

One glass is 5

2 glasses will be $5 * 0.6 = 3$

so 1 glass costs 5, 2 cost 3 so $3 * 3 = 9$ left is $16 - 3 = 13$ left

$13 * 5 = 65$

<answer> 65 </answer>
