

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

The second glass costs $5 \times 60\% = \$3$.

So, for the first $16 - 1 = 15$ glasses, Kylar needs to pay $5 \times 15 = \$75$.

[illegible]

Therefore, Kylar needs to pay a total of $\$75 + \$5 = \$80$ for all the glasses.

</think>

< answer >

80

</answer>
