

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
The cost of the second glasses is $60\% * 5 = \$3$ per glass .
Thus , Kylar pays $5 + 3 = \$8$ for every two glasses .
He thus pays $8 / 2 = \$4$ for each glass of glasses .
So Kylar pays $4 * 16 = \$64$ for 16 glasses .

</think>
<answer>
64
</answer>
