

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
If Janet lays 16 eggs per day and eats 3 for breakfast , she has $16 - 3 = 13$ eggs remaining .
She then bakes 4 muffins using 4 of those eggs , so $13 - 4 = 9$ eggs are left for the farmers ' market .
Since she sells each egg for \$2 , the total amount she makes is $9 \text{ eggs} * \$2 \text{ per egg} = \18 .
</think>< answer > 18 </answer>
