

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> So if Janet's ducks lay 16 eggs per day and she eats 3 for breakfast , then she is left with $16 - 3 = 13$ eggs per day . Since she uses 4 of the eggs to bake muffins , then $13 - 4 = 9$ eggs are available for the market . Janet sells the eggs at \$2 each , so the amount of money she makes each day is $9 * 2 = 18$ dollars </think> <answer> 18 </answer>
