

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> So , if a robe takes 2 bolts of blue fiber , and it takes half as much white fiber as blue fiber , then it takes $2 / 2 = 1$ bolt of white fiber . To find the total amount of fiber needed , I need to add the blue and white fiber together , so $\text{total_fiber} = 2 \text{ (blue)} + 1 \text{ (white)} = 3$ bolts of fiber </think><answer>3</answer>
