

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think> So if each of the 20 chickens gets 15 cups of feed in the morning and 25 cups of feed in the afternoon , we first need to calculate the total amount of feed given in the two previous meals , which is $15 + 25 = 40$ cups . Since we know that Wendi feeds each of her 20 chickens 3 cups per meal , we can calculate the total number of meals eaten throughout the seven decimal wrestlers records queer taxa TRUE
