

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
Number of sprints James runs in a week = 3 sprints * 3 times a week = 9 sprints
Distance covered in each sprint = 60 meters
Total distance covered in a week = 9 sprints * 60 meters per sprint = 540 meters
</think><answer>540</answer>
