

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Number of glasses Kylar wants to buy = 16
Cost of one glass = \$5
Cost of every second glass = 60% of \$5 = 0.6 * \$5 = \$3
Total number of pairs of glasses = 16 / 2 = 8
Total cost = 8 * \$5 + 8 * \$3 = \$40 + \$24 = \$64
</think><answer>64</answer>
