

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
Number of sprints per week = 3 times a week
Distance covered per sprint = 60 meters
Total distance covered in a week = 3 sprints / week * 60 meters/sprint = 180 meters / week
So , James runs a total of 180 meters per week
