

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

Cost of one glass = \$ 5

Cost of the second glass = 60 % of \$ 5 = 0 . 6 * 5 = \$ 3

Total cost for 16 glasses = (Cost of one glass) * (number of glasses - 1) + (Cost of the second glass)

Total cost = (5 * (16 - 1)) + 3

Total cost = (5 * 15) + 3

Total cost = 75 + 3

Total cost = \$ 78

</think>< answer > 78 </answer>
