

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

Original price of the house = 800 00

Amount of repairs = 500 00

New total value of the house = 800 00 + 500 00 = 130 000

Value increase = 150 % of 800 00 = 130 000

To find the profit, subtract the amount from Josh brought in from the increased value of the house,

which is 510 000 - 800 00 = 130 000 - 800 00 = 150 000 '<
