

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

Total number of meters ran in a sprint = 60 meters

Number of sprints in a week = 3 times

Total meters ran a week = $60 * 3 = 180$

</think>

<answer>

180
