

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
One glass cost \$5.
The second glass cost $\$5 \times 60\% = \3 .
Kylar can save $\$5 - \$3 = \$2$ for every second glass.
Kylar can save a total of $\$2 \times 15 = \30 for the next 15 glasses.
Kylar needs to pay $\$5 \times 1 + \$3 \times 1 + \$30 = \38 .
</think>
<answer>
38
</answer>
