

**Question:**

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

**Reasoning + Answer:**

<think>

One cheaper glass costs  $5 * 60 / 100 = \$3$ .

So every pair of glasses, one normal and one cheaper, cost  $5 + 3 = \$8$ .

Kylar needs to buy  $16 / 2 = 8$  pairs of glasses.

So he will pay  $8 * 8 = \$64$  in total.

</think>

<answer>

64

</answer>
