

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
He drove 3 hours * 60 mph = 180 miles from home
He spent 2 hours in traffic so he had 4 - 2 = 2 hours to drive
He drove 0.5 hours at 30 mph so he moved 0.5 hours * 30 mph = 15 miles
He then drove 2 hours - 0.5 hour = 1.5 hours at 80 mph so he moved 1.5 hours * 80 mph = 120 miles
So he is 180 - 15 - 120 = 45 miles from home
</think>
<answer>
45
</answer>
