

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
Janet eats 3 eggs / breakfast * 16 eggs per day = 48 eggs .
She bakes 4 muffins * 16 eggs per day = 64 eggs .
The total number of eggs used is 48 eggs + 64 eggs = 112 eggs .
The number of eggs remaining is 16 eggs - 112 eggs = - 96 eggs . Since you can't sell negative eggs ,
this means her ducks did not lay enough eggs to sell any that day .
The solution is to add 16 eggs to the remaining negative number of eggs to find how many eggs she
actually laid and can sell : 16 eggs + (- 96 eggs) = - 80 eggs . She then needs to sell 16 eggs - 80 eggs
= - 64 eggs . Again , this is a negative number , so she needs to add this to the number of eggs laid : 16
eggs + (- 64 eggs) = - 48 eggs . Trying again , 16 eggs + (- 80 eggs) + 16 eggs = 48 eggs Janet should
sell at the market .
Janet sells 48 eggs / \$ 2 per egg = \$ 96 per day at the farmers ' market .
</think>
<answer>
96
</answer>
