

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
John spent 2 hours stuck in traffic , 0 . 5 hours driving slowly and 2 hours driving at a high speed to get home , so he was traveling for 2 . 5 hours .
John drove at 80 mph for 2 hours , so he went $2 * 80 = 160$ miles
John drove at 30 mph for 0 . 5 hours , so he went $30 * . 5 = 15$ miles
John drove at 60 mph for 3 hours , so he went $60 * 3 = 180$ miles
All together , John drove $160 + 15 + 180 = 355$ miles
John 's home is 355 miles away , and he spent 2 hours stuck in traffic , so he is now $2 * 60 = 120$ miles from home
John drives 120 miles at 60 mph , so he will be home in $120 / 60 = 2$ hours
John has been driving for 2 . 5 hours already and has 2 more to drive , so he will be home in $2 . 5 + 2 = 4 . 5$ hours
John drove 355 miles and still has 355 miles to drive , so he is 355 miles away from home
</think>
<answer>
355
</answer>
