

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

One cheaper glass costs $5 * 60 / 100 = \$3$.

So every pair of glasses, one normal and one cheaper, cost $5 + 3 = \$8$.

Kylar needs to buy $16 / 2 = 8$ pairs of glasses.

So he will pay $8 * 8 = \$64$ in total.

</think>

<answer>

64

</answer>
