

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

One glass costs $5 * 60 / 100 = \$3$.

Every second glass is cheaper, so Kylar would have to pay only $16 / 2 = \$8$ for them.

Kylar would need to pay $5 + 8 = \$13$ for all glasses.

</think>

<answer>

13

</answer>
