

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>

First find the total time of the first part of the download : $200 \text{ GB} \div 2 \text{ GB/minute} = 100 \text{ minutes}$

Then multiply that time by the percentage downloaded before the restart : $100 \text{ minutes} \times 40\% = 40 \text{ minutes}$

Then find the total time the second part of the download takes : $100 \text{ minutes} + 20 \text{ minutes} = 120 \text{ minutes}$

Then add the time of the first and second part of the download to find the total time : $120 \text{ minutes} + 40 \text{ minutes} = 160 \text{ minutes}$

</think>

<answer>

160

</answer>
