

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>
So far today, Wendi has given her chickens $15 + 25 = 40$ cups of feed.
Since she feeds each chicken 3 cups of feed per meal, she has already fed each chicken $3 * 2 = 6$ cups of feed today.
Thus, in the final meal of the day, Wendi will need to feed her chickens $3 * 20 - 6 = 48$ cups of feed.
</think>
<answer>
48
</answer>
