

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>
He drove for 3 hours going 60 mph , so he traveled $3 * 60 = 180$ miles from home .
He spends 2 hours stuck in traffic , then spends half an hour driving at 30 mph so he traveled $(2 + 0 . 5) * 30 = 70$ miles during that time .
He then drives for 3 . 5 hours at 80 mph so he travels $3 . 5 * 80 = 280$ miles during this time .
The total distance traveled is $180 + 70 + 280 = 530$ miles , but the total driving time was 4 hours so he is $4 * 60 - 530 = 140$ miles from home .
</think>
<answer>
140
</answer>
