

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> <think> he runs 3 sprints <think> so the distance per week for 3 sprints will be <think> $3 * 60 = 180$ </think> meters </think> and <think> runs 3 times a week <think> so , the total distance he will run in a week will be <think> $180 * 3 = 540$ </think> </think> </think> </think>
><answer> 540 meters </answer>
