

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> the total eggs in the day are 16 and jan et eats 3 eggs for breakfast and have 4 for breakfast .
Thus the total eggs given for sale in the market are 16 _{total eggs} - 3 <eat eggs</sub>
> - 4 <sold eggs</sub> = 9 <total eggs left</sub>. but she sells the remaining eggs at 2 <per egg</sub>
</sub> so it is 9 <total eggs left</sub> * 2 <per egg</sub> = <think> 9 * 2 </think> = 18 <total
earning market</sub>. </think><answer> 18 </answer>
