

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> the total meters for one sprint is 60 , and James does 3 sprints . to find the total for one week , first James runs <think> $60 * 3 = 180$ meters </think> in a week . </think><answer>180</answer></answer>
