

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

There are 8 glasses that cost 60% of \$5, which is $60\% * \$5 = \3

There are $16 - 8 = 8$ glasses that cost \$5

8 glasses that cost \$5 cost $\$5 * 8 = \40

The 8 glasses that cost 60% of \$5 cost $\$3 * 8 = \24

Kylar has to pay $\$40 + \$24 = \$64$ for the 16 glasses

</think>

<answer>

64

</answer>
