

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>

The first glass costs \$ 5 , so all of the others need to cost $5 * 0.60 = \$3$ for Kylar to only pay \$ 5 for them .

This means the total cost of all the glasses will be $3 * 14 + 5 = \$47$.

</think>

<answer>

47

</answer>
