

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

```
<think>
There are 8 glasses that cost 60% of $5, which is 60%*$5=$3
There are 16-8=8 glasses that cost $5
8 glasses that cost $5 cost $5*8=$40
The 8 glasses that cost 60% of $5 cost $3*8=$24
Kylar has to pay $40+$24=$64 for the 16 glasses
</think>
<answer>
64
</answer>
```
