

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

The increased value of the house is 150% of the initial price , so that is $150/100 * 80000 = 120000$

.

The total value of the house after the increase is $80000 + 120000 = 200000$.

The total cost of the house , which is the sum of the initial cost and the cost of repairs , is $80000 + 50000 = 130000$.

Profit is the difference between the final value and the total cost , so that is $200000 - 130000 = 70000$.

</think>

<answer>70000</answer>
