

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>The number of eggs Janet does not eat for breakfast is $16 - 3 = 13$. The number of eggs after making muffins is $13 - 4 = 9$. Since she sells the rest at the market for \$2 each, the amount she makes every day at the market is $9 * 2 = 18$. </think><answer>18</answer>
