

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>The house's value increased by 150%, which means the increase in value is <think>150/100 * 80000 = 120000</think>. So, the total value of the house after the increase is <think>80000 + 120000 = 200000</think>. The profit Josh made is the increase in value minus the total amount he spent, which is <think>200000 - (80000 + 50000) = 70000</think>. Thus, the profit Josh made is <think>70000</think>.</think><answer>70000</answer>
