

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

James runs 3 sprints per session and 3 sessions per week . So the total number of sprints he runs in a week would be <think> 3 sprints/session * 3 sessions / week = 9 sprints / week </think>. Since each sprint is 60 meters , the total distance he runs in a week would be <think> 9 sprints / week * 60 meters /s print = 540 meters / week </think>. Therefore , he runs 540 meters every week .

</think>

<answer>540</answer>
