

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

James runs 3 sprints a week , so the total distance of one week is 3 sprints Ã 3 days = 9 sprints . Then he runs 60 meters per sprint , so the total distance he runs in a week is 9 sprints Ã 60 meters per sprint = 540 meters .

</think>

<answer>

540 meters</answer>
