

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

The increased value of the house is calculated as 150% of the original value , which is <think>
 $(80000 * 150 / 100) = 120000$

</think>

So the new total value of the house becomes <think>
 $120000 + 80000 = 200000$

</think>

The total amount Josh spent on buying the house and the repairs is <think>
 80000 (original price) + 50000 (repairs) = 130000

</think>

So , the profit he made is <think>
 200000 (new total value) - 130000 (total spent) = 70000

</think>

Therefore , the profit Josh made is <answer>70000</answer>.
