

Question:

Every day, Wendi feeds each of her chickens three cups of mixed chicken feed, containing seeds, mealworms and vegetables to help keep them healthy. She gives the chickens their feed in three separate meals. In the morning, she gives her flock of chickens 15 cups of feed. In the afternoon, she gives her chickens another 25 cups of feed. How many cups of feed does she need to give her chickens in the final meal of the day if the size of Wendi's flock is 20 chickens?

Reasoning + Answer:

<think>

the total feed Wendi gives her flock is $15 + 25 = 40$ cups .

and if the size of her flock is 20 then the feed per chicken in total feed is $40 / 20 = 2$ cups per chicken .

the feed for the final meal per chicken is $3 - 2 = 1$.

and the feed she needs to give her chickens for the final meal is $1 \times 20 = 20$ cups .

</think>

<answer>

20 </answer>
