

Question:
Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the increased value of the house is
$$\backslash[80,000 \times 150\% = 80,000 \times 1.5 = 120,000$$

$$\backslash]$$

so the current price for the house is
$$\backslash[80,000 + 120,000 = 200,000$$

$$\backslash]$$

The profit Josh makes is
$$\backslash[200,000 - 100,000 = 100,000$$

$$\backslash]$$

where 100,000 is the price Josh paid for the house including the repairs
</think>
<answer>
100,000</answer>
