

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <think> firstly i need to know how many eggs she is selling ; for that i need to calculate the total eggs laid by jan et 's ducks daily and subtract the eggs she eats and the eggs she uses for baking , so i get 1 6 (eggs per day laid by ducks) - 3 (eggs for breakfast) - 4 (eggs used for baking) = 9 (eggs for sale); then i need to find out how much she makes daily selling the eggs , and for that i need to multiply the number of eggs for sale by the price per egg , so i get $9 * 2 = 18$; </think> <answer> 18 </answer> </think>
