

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <smart> firstly i figured the amount of eggs sold daily after 3 are eaten for breakfast and 4 are used to make muffins , then i calculated the sale of the eggs at 2 dollars per egg to get the total income ; the calculation was $(16 - 3 - 4) \times \$2$ </smart> ; used an arithmetic calculation of $(16 - 3 - 4) \times 2$ i.e 16 eggs - 7 eggs (3 for breakfast + 4 for muffins) = 9 eggs for sale at 2 per egg ; and used the multiplication (9×2) to calculate the total sales at \$ 18 ; and therefore i was able to figure the daily income </think>
<answer>\$18</answer>
