

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

the initial amount of money invested by Josh is $80\,000 + 50\,000 = 130\,000$ dollars

the value of the house increased by 150% of 80 000 so $80\,000 * 1.5 = 120\,000$

the new value of the house is $120\,000 + 80\,000 = 200\,000$ dollars

the profit is the difference between the new value of the house and the total invested $200\,000 - 130\,000 = 70\,000$ dollars

</think>

<answer> 70 000 </answer>
