

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the original price of the house was \$80,000
Josh invested \$50,000 worth of repairs, thus the overall investment on the house being \$50,000 + \$80,000 = \$130,000
the value of the house increased 150% which is equal to 1.5
the new value is 1.5 times the increased price = $1.5 * 80000 = 120000$
to find the profit, subtract the total investment from the increase in value which is $120000 - 130000$
= -10000
</think>
<answer>-10000</answer>
